150W Transformer Connection

PLEASE NOTE: We recommend hiding the transformer by placing it in an accessible panel, attached to a wall stud. The logo can work fully hardwired or on a switch.

- 1. Verify that power has been shut down to the circuit you're working on.
- 2. Using wire nuts or electrical tape, connect the power coming from your building to the wires going into your transformer.
- 3. Using wire nuts or electrical tape, connect the blue and brown wires coming from your transformer to the wires of the product.
- 4. All connections should be stored within the transformer housing.
- 5. Attach and secure housing cover to housing body.

This sign is intended to be installed in accordance with the requirements of Article 600 of the National Electric code and/or other applicable local codes. This includes proper grounding and bonding of the sign.

The location of the disconnect switch after installation shall comply with Article 600.6(A)(1) of the National Electrical Code.
